

ERD - Travel Consultancy

Assumptions:

1. Statistics are calculated monthly per consultant (month + year combination). Each row in "statistics" summarizes that consultant's calls for that period.
2. A consultant may belong to one or more teams at the same time, and can also have periods with no team assignment.
3. A team can only be assigned to one region at a time, but may be reassigned to other regions over time.
4. Each call is handled by exactly one consultant. Consultants log only the calls they personally take.

ERD - DVD Rental

Assumptions

1. A manager is represented as a staff member with position = Manager. The 1:1 link reflects "one manager per branch at a time"
2. A member can be registered in multiple branches simultaneously. registrationDate stored in member_branch is to capture registration at each branch separately
3. A dvd belongs to exactly one branch and one movie.
4. A rental records only one dvd per transaction (not bundles).
5. dailyCost is stored on rental to preserve the price at the time of rental (even though the standard rate applies to all copies at a branch).
